

# Education Transformation Framework

Use these ten components of transformation to plan and implement change at systemic level. Start by identifying your readiness stage – developing leadership and policy, or implementing 21st century pedagogy – and then select objectives that fall within your vision. Each objective is underpinned by an executive summary and an academic whitepaper detailing global evidence, so you can use best practice to speed up effective transformation.

## Leadership and Policy

### Organizational Capacity, Strategic Planning and Quality Assurance

How will we develop and celebrate a culture of innovation?  
How will we embed meaningful professional learning?

### Inclusion, Accessibility and Sustainability

How do we ensure all students have access to learning when and where they need? Is it sustainable, scalable, and replicable?

### Establishing a Vision

What does an effective learning environment look like? How will we communicate and lead our vision?

### Partnerships and Capacity Building

How will we engage partners in transformation? How will we involve the community?

### Curriculum and Assessment

How will essential skills be developed and assessed? How will we enable deep learning?

### Physical Learning Environments

How are we redefining physical and virtual learning spaces? How do learning spaces support personalized and collaborative learning?

### Developing a Learning Community

How do we support communities of practice and inquiry? How do we balance individual needs, community development, and accountability?

### Teacher and Leader Capacity

How will we support positive change? What policies enable our vision?

## 21st Century Pedagogy

### Personalized Learning

How do we optimize learning for each student? How do we support collaboration, creation and production?

### Designing Technology for Efficient and Effective Schools

How are we maximizing student safety, data security, and learning?  
How are we planning for increasing technology needs?
